HOT CARS CAN KILL.

WHY PETS AND VEHICLES DON'T MIX

- A dog, for example, has a normal body temperature of about 39°C (102°F). Unlike people, a dog has a limited ability to sweat to cool off. So even a brief time in a hot environment can be life threatening.
- After reaching a body temperature of 41°C (106°F), it doesn't take long for a pet to begin suffering irreparable brain damage or death.
- Even on a mild day, with the windows open and parked in the shade, the temperature in a vehicle can rapidly reach very dangerous levels.
- As a result, many pets die each year simply by being left in a parked vehicle during warm weather. But you can do something about it.

ACT FAST. SAVE A LIFE.

If you spot an unattended pet in a vehicle that appears to be suffering from heat exhaustion:

- Call 310-SPCA (7722), 24/7
- or Call 1-888-668-7722

Spread the word and take the pledge!
