

## **Tube Feeders For Dogs**

There is no food grade PVC pipe available in Canada therefore use ABS water pipe.

Pipe food dispensers are super cheap and easy to make, and they are a combo food dispensing device/chew item.

### **Materials:**

- PVC or ABS piping (at least 1 inch in diameter)
- 1 cap (ensure right size for the piping that you chose)
- 1 screw on cap (ensure right size for the piping that you chose)- this will aid in the cleaning process
- Drill
- Sand paper

### **What To Do:**

1. Cut piping to a suitable length- 30 cm length work great!
2. Using a drill, make at least two holes through pipe. Make the holes slightly larger than the size of the kibble.
3. Using sand paper, smooth any rough areas of the drilled holes on the inside and outside of the pipe- all jagged edges should be removed to avoid injury when the dog is licking at it.
4. Place caps on each end of the piping.
